## Paper 1H

Specimen 2018 (set 2)
Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler
- a scientific calculator
- the periodic table (enclosed).

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

## Information

- The maximum mark for this paper is 100 .
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

In the 1860s scientists were trying to organise elements.

Figure 2 shows the table published by John Newlands in 1865.
The elements are arranged in order of their atomic weights.

| $\mathbf{0}$ | $\mathbf{2}$ A student investigated the law of conservation of mass. |
| :--- | :--- |

The law of conservation of mass states that the mass of the products is equal to the mass of the reactants.

This is the method used.

1. Pour lead nitrate solution into a beaker labelled $\mathbf{A}$.
2. Pour potassium chromate solution into a beaker labelled $\mathbf{B}$.
3. Measure the mass of both beakers and contents.
4. Pour the solution from beaker $\mathbf{B}$ into beaker $\mathbf{A}$.
5. Measure the mass of both beakers and contents again.

When lead nitrate solution and potassium chromate solution are mixed, a reaction takes place.

This is the equation for the reaction:

$$
\mathrm{Pb}\left(\mathrm{NO}_{3}\right)_{2}(\mathrm{aq})+\mathrm{K}_{2} \mathrm{CrO}_{4}(\mathrm{aq}) \rightarrow \mathrm{PbCrO}_{4}(\mathrm{~s})+2 \mathrm{KNO}_{3}(\mathrm{aq})
$$
